

RUBBERWOOD

Resilient hardwood that is perfect for withstanding wear and tear. Made by joining individual staves to form a very solid and strong worktop, which makes it suitable for heavy-duty works. Environmentally friendly – harvested from latex-depleted plantation rubber trees and does not contribute to deforestation. Resin-based natural varnish ensures an impervious protective coating that is hardwearing and enhances the aesthetics at the same time. Comes in standard eased edge profile.

TECHNICAL SPECIFICATIONS

- **Thickness:** 20mm, 25mm, 40mm, 50mm
- **Material:** Finger joint rubberwood
- **Finishing:** Natural varnishing
- **1 year** manufacturer warranty

Reverse Chamfer

Half Bullnose

Eased Edge

MAINTENANCE & CARE GUIDELINES

Clean the surface just with a soft sponge or soft rag - (DO NOT use the abrasive "green" side of the sponge). Use common household cleaners without abrasives like detergent or window cleaner.

Always wipe dry with kitchen towel or dry cloth. Any prolonged exposure to liquids may damage or stain the worksurface.

We recommend instituting a regimen of monthly or quarterly inspections of all surfaces plus daily or weekly cleanings to maintain your worksurface's original finish and to help ensure a safe, uncontaminated working environment. The following list contains items you may wish to have on-hand for regular cleaning and to handle most problems that may occur.

- Clean rags or sponges (always use moist, not wet)
- Mild soap or household cleaners

Note: Never use wax or polish containing wax. Also never use abrasive pads, sponges, powders or liquids (such as Soft Scrub) as surface damage will occur.
